EXAMPLES OF WORK IN PROGRESS

Individual differences in decision-making competence across the lifespan.

Funded by the *European Union (FP7 Marie Curie Career Integration Grant)* and previously by the *U.S. National Science Foundation*, this project involved the development and validation of a comprehensive measure of Adult Decision-Making Competence (A-DMC), which used well-known judgment and decision-making tasks. Since that initial project, we have been examining the mechanisms underlying changes in decision-making competence across the adult lifespan, as well as relationships with well-being, life events, and health outcomes. We also used our measure to evaluate educational interventions that aim to teach better decision-making competence to people of all ages.

Preferences for health information.

Funded by the *Swedish Riksbankens Jubileumsfond*, this project aims to understand people's preferences for health information. We compare people's responses to statistical and anecdotal health information as provided by other patients and health care professionals, and how those responses vary by age. Our study was conducted on the *University of California's Understanding America Survey* and is relevant to the designers of health risk communications.

Public preparedness for extreme weather and climate change

With funding from the *U.K. Economic and Social Research Council (ESRC)*, the *U.K. Department of Environment, Food and Rural Affairs (DEFRA)*, and *U.S. National Science Foundation/Carnegie Mellon University Center for Climate and Energy Decision Making*, my colleagues and I have been conducting interviews and surveys to examine climate change beliefs and public preparedness for extreme weather events, such as heat waves. We find that people in the UK are more concerned about wet weather than hot weather changes, and that positive emotions about heat undermines their willingness to prepare for heat waves. We are testing strategies for promoting public protection against health risks associated with extreme weather.

Public perceptions of emerging technologies

Funded by the *U.S. National Science Foundation*, this collaboration with engineers at the Climate and Environmental Decision Making Center at *Carnegie Mellon University* examines how consumers perceive the risks and benefits associated with emerging technologies such as xenotransplantation and hurricane modification. We are testing communication efforts aiming to help people to make more informed decisions about whether or not to support widespread implementation of these technologies.
